

Lecture 19

Standard Model

The version of QFT that our universe is characterized by.

As we've seen much of the world is fixed by the basic principles of Quantum Mechanics and Lorentz Invariance.

0, 1/2, 1, 3/2, 2

Spin-1 must be Yang-Mills (ect)

SM attempts to explain all phenomena of particle physics in terms of small number of particles.

Actually 4 different types

Leptons Spin-1/2 (Left and Right handed fields) Experience Weak and EM interactions

$$\begin{pmatrix} \nu_e \\ e \end{pmatrix} \quad \begin{pmatrix} \nu_\mu \\ \mu \end{pmatrix} \quad \begin{pmatrix} \nu_\tau \\ \tau \end{pmatrix}$$

Quarks Spin-1/2 Strong, Weak and EM interactions

$$\begin{pmatrix} u \\ d \end{pmatrix} \quad \begin{pmatrix} c \\ s \end{pmatrix} \quad \begin{pmatrix} t \\ b \end{pmatrix}$$

Gauge Bosons Spin-1 Force Carriers

$$\gamma \quad g(\times 8) \quad W^\pm \quad Z$$

Higgs Boson Spin-0

H

All are assumed to be elementary. No internal structure.

Leptons

Quantum Number associated with each generation.

eg:

$$L_e \equiv N(e^-) - N(e^+) + N(\nu_e) - N(\bar{\nu}_e)$$

All other particles has $L_e = 0$.

Electron number is a conserved quantity.

\Rightarrow electrons (ν_e) must be created/destroyed in pairs.

Corresponding conserved lepton numbers for μ s and τ s.

L_μ

L_τ

Leptons masses (GeV):

$$\begin{pmatrix} m_\nu \\ 10^{-3} \end{pmatrix} \quad \begin{pmatrix} m_\nu \\ 10^{-1} \end{pmatrix} \quad \begin{pmatrix} m_\nu \\ 1.7 \end{pmatrix}$$

Note: $\sum m_\nu < 10^{-9} GeV$

Once thought to be 0. Now known that at least 2 (maybe all) have $m_\nu > 0$.

W/Z Exchange

EM mediated by the exchange of a photon.

Similarly for the weak interaction, force mediated by W^\pm or Z .

When drawing diagrams, must remember to conserve Lepton numbers and EM charge.

eg:

Lepton Universality All data consistent with hypothesis that interaction of all generations are the same. (Modulo mass differences)

$$m_z = 90\text{GeV} \quad m_W = 80\text{GeV which } \neq 0!$$

This has a major implication for the range, or effective strength of the interaction.
